Ignore this...it is a test with a purpose: does one have to be subscribed in order to have a message to MajorDomo reflected to the list.

Here's the current count, more when my license comes through

NN1G 20M rigs 1 Dan's kit, 2 standard NN1G, own board, 1 modified board
ARK 20
Radiokit 20
OHR Classic
ARRL Handbook 6 watter
Gary Breed 20

That's only about 9 ... wonder how many Jeff has.. :-)

72,
Daniel

[SNIP! List of nine QRP kits deleted]

Hey Dan, you don't even have your ticket yet and you have all those QRP kits? Sheeze... bet you did not know this, but there is a word hams use to describe guys like you... we call you guys, "Max." That means, maximum equipment minimum license! It generally gets applied in a not-too-kind manner to the CBer who shows up for the first two or three of our novice classes every fall and immediately gets on everyone's nerves as he talks about his TS-950sdx and Moonraker 6 at 75', of and of course, some type of MASSIVE "lini-er." They almost always have the latest dual-band HT strapped to their belt also. :-)

They always want to upgrade to extra ASAP within a week or two, also.

Of course, in ***YOUR*** case, we call you MAX with ALL DUE respect given to a fellow QRPP enthusiast! Hope you get your ticket soon, too.

Heheheheh! I sold my TS-440sat a couple years back and kept the then 8 year old Corsair 1 because it was a better "radio" (the TS-440 was a MUCH better toy loaded with bells and whistles, though!). That action drove the local Kenwood Freaks NUTS!

Hmmm... I've never really been happy with any of the microphones I've run across for the Corsair. Right now I have a real old Yaesu microphone on it. I bought a HEIL element to slip into a D-104 but the impedance was 6K and the Ten Tec wants >30K or so (high impedance) and I've never been able to find a suitable transformer, not that I've LOOKED too hard :-)

Did you find the EV 638 at a swap or buy one new?

Subject: QRP rigs

OK,

at one time I had quite an inventory of rigs..after the last sale.. only have the Ten Tec Argosy II, The Argonaut 509, Oak

Hills dual band, HW9, ARK4, MFJ9030 (built from parts..not assembled), MFJ 20 SSB. Have an unbuilt Norcal40, ugly weekender, and may someday (with Joe from net's help) have a working NN1G, and with Chuck's help a working RadioKit (believe they work when I see it).

Now if we were going to list all the kits we have built in the last 2 years .. .might be interesting.

We hear that an Argosy will stay right on frequency, and that seemed to be how my Corsair PTO acted until I rebuilt it mechanically (several times, I might add, until I got it right :-). So, I may have physically stressed some components or something else may have happened. Any thoughts? It now drifts far more than the tiny bit it did before my PTO exploit.

Does a list exist of the publications, club newsletters, non-club newsletters, etc. that are available to qrp-ers in general?
